SOFTWARE DEVELOPMENT COMPANY · COIMBATORE, INDIA

Software development for business teams

Kiyosoft builds custom ERP and CRM systems, websites and business applications for the web, mobile and desktop, and supports them after launch. We design, build, test, host and maintain, with senior engineers on every project.

kiyosoft.com/work · info@kiyosoft.com · +91 96779-00977

01 Core services

ERP and CRM development

ERP and CRM systems built around how your business actually runs: customers and leads, quotations and orders, purchasing, stock, service and billing in one place, with approval workflows, role-based access and a full audit trail.

- Lead-to-invoice sales cycle with GST billing
- Purchase receipt, stock allocation and dispatch
- Approval workflows, roles and audit trails

Website development

Websites are the public face of your business: fast, search-friendly pages anyone can visit, built to explain what you offer and turn visitors into enquiries. Corporate sites, product catalogues and interactive showcases, prerendered for speed and easy to keep up to date.

- Corporate websites
- Product catalogues with enquiry forms
- Interactive 3D product showcases

Web application development

Web applications are software people sign in to and work in: secure portals for staff, customers or partners, dashboards over your live data, and multi-step approval workflows. Built in Angular over .NET APIs, with roles, permissions and audit trails.

- Authenticated staff, customer and partner portals
- Operational dashboards and reports
- Multi-step approval workflows

Mobile application development

Android and iOS apps for customers and field teams, including offline-first apps that keep working without a connection and sync when it returns. From the first design to the store listing.

- Field-team apps that work offline
- Customer apps with sign-in and cloud sync
- Play Store and App Store publishing

Desktop application development

Windows and macOS applications for work that belongs on the desktop: local files and hardware, offline use, and processing that stays on the machine. Also desktop editions of web applications, sharing one codebase.

- On-device meeting transcription
- Spreadsheet-to-accounting automation
- Desktop editions of web applications

02 Design and engineering services

Everything around the software: its design, its intelligence, how it connects, how it runs, and who looks after it.

UI/UX design

Interfaces designed with the people who will use them: user flows, wireframes and prototypes, then design systems with light and dark themes, built to be accessible and responsive on every screen size.

- User flows, wireframes and prototypes
- Design systems with light and dark themes
- Accessibility reviews

AI and machine learning development

AI built into the software you already use: document-search assistants that answer from your own files, classification of incoming documents and requests, and extraction of fields from documents. Cloud or local models, chosen for your data and privacy needs, with people reviewing the results that matter.

- Document-search assistants over your own files
- Classifying documents, emails and requests
- Extracting data from documents and drawings

Enterprise systems, integrations and modernization

Systems that work together: APIs and integrations between your applications and services such as accounting, payments and messaging, and step-by-step modernization of older systems into secure web platforms without stopping the business.

- Accounting, payment and messaging integrations
- Legacy desktop systems moved to the web
- Service and API design

Cloud deployment and DevOps

Reliable releases and hosting: automated build and release pipelines, deployment to the cloud or your own servers, monitoring, backups and safe rollbacks.

- Azure and on-premise hosting
- Automated build and release pipelines
- Monitoring, backups and rollbacks

Testing, maintenance and support

Automated and manual testing before every release, then ongoing maintenance after launch: fixes, security and framework updates, and enhancements as your needs change.

- Unit, end-to-end and load testing
- Security and framework updates
- Monthly maintenance and enhancements

Dedicated engineering teams

Senior Angular and .NET engineers who join your product team, follow your process and tools, and deliver from the first sprint. Billed monthly, scaled up or down as your plans change.

- Engineers in your tools and rituals
- Monthly billing
- Scale up or down month to month

Website or web application?

A **website** is public: corporate sites, product catalogues and interactive showcases that explain what you offer and bring in enquiries. A **web application** is software people sign in to: portals, dashboards and approval workflows that run part of your business.

Kiyo CRM: from customer record to quotation

CRM and billing · Web, Windows desktop and Android

Our CRM and billing suite for Indian businesses: customers and leads, quotations, sales orders, deliveries, GST invoices, payments and collections in one place, with Tally and Excel import and export.

1 Customer record

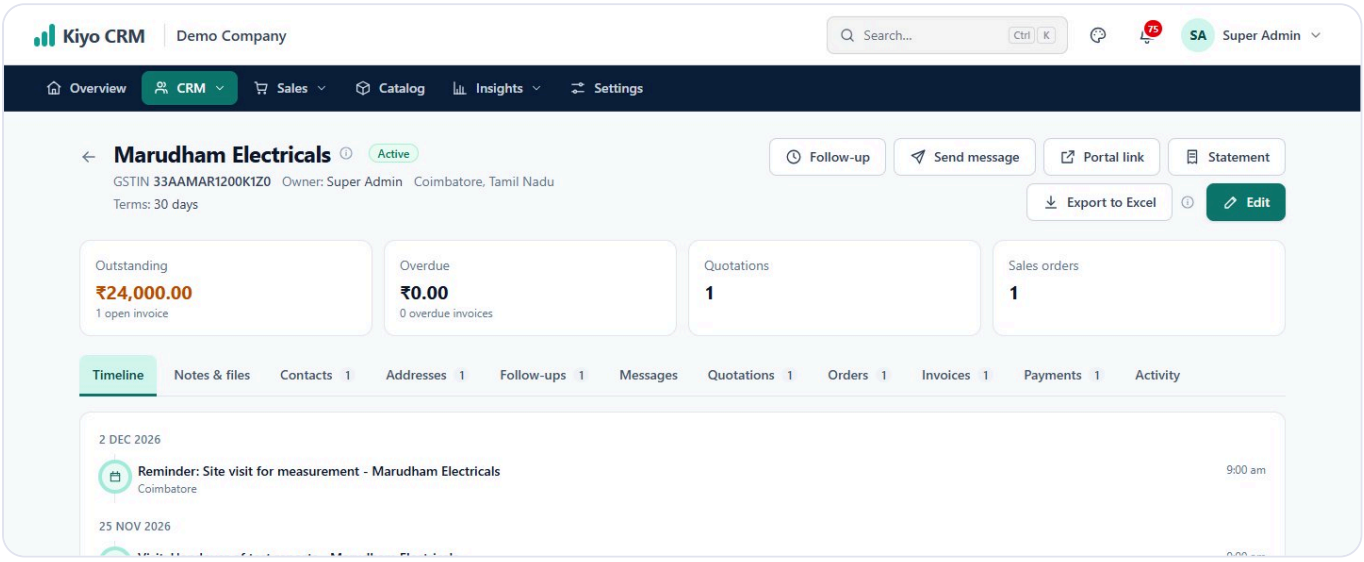

One page per customer: outstanding and overdue amounts, open quotations and orders, and a timeline of visits, follow-ups and notes.

2 Quotation

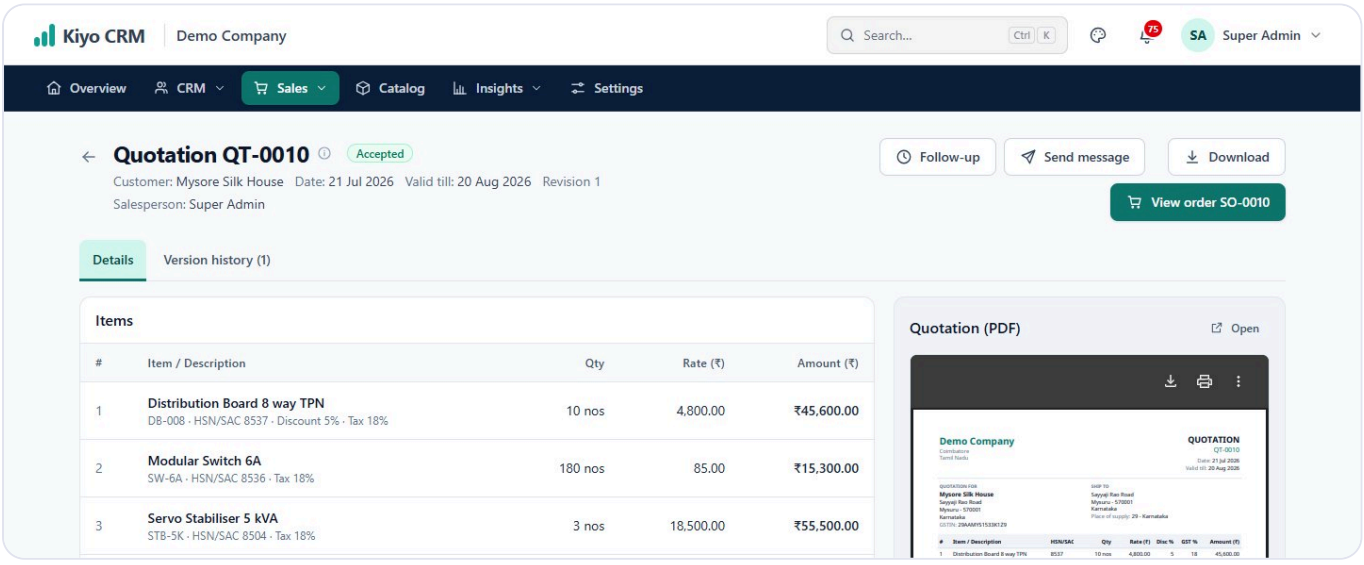

Line items with HSN codes and discounts; GST is worked out on the server, and every revision is kept.

3 Quotation PDF

A PDF with a UPI QR code, shared with the customer and accepted through the customer portal.

Customer record (sample data): outstanding and overdue amounts, quotation and order counts, and a timeline of visits, follow-ups, notes and contracts.

Quotation (sample data): line items with HSN codes, a discount and IGST worked out, with the quotation PDF alongside.

A working demo with sample data, shown on a call. Ask for one at info@kiyosoft.com.

IN-HOUSE PRODUCT · Private walkthrough available

Kiyo ERP: one system for the whole business

ERP for distribution · CRM, sales, purchasing, inventory, service, HR, payroll and accounting

One system for a medical-equipment distributor: leads and hospital customers, quotations, sales orders, delivery challans and invoices; purchase requisitions, orders and goods receipts; batch- and serial-tracked stock across warehouses; installation and service jobs; employees, attendance, leave and payroll; and accounting from the posted ledger, with approval workflows across all of it.

1 Purchase receipt

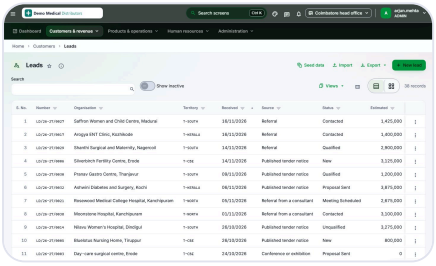

Goods arrive against a purchase order and are inspected, with accepted and rejected quantities recorded on each line.

2 Stock allocation

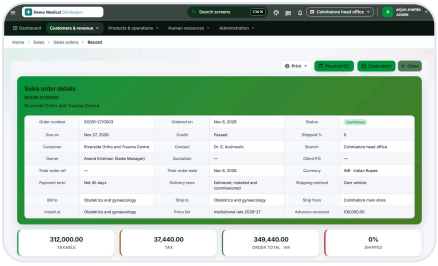

Stock on hand by warehouse and location, with quantities reserved against open sales orders and what is still available.

3 Dispatch

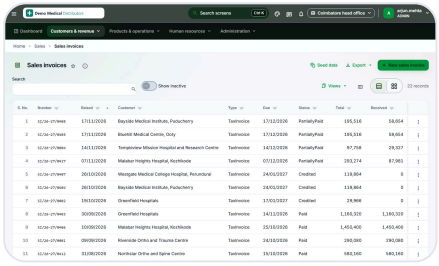

Confirmed orders ship on delivery challans, tracked through delivery to the customer's acknowledgement or a return.

Kiyo Take-off: from drawings to a bill of quantities

AI for piping engineering · Drawing take-off and bill of quantities

Reads piping isometric drawings (CAD plots, scans or 3D-model exports) with an AI vision model: it transcribes each sheet's material table and title block, reads the drawing itself to check it against the table, and validates every row against the piping class. After an engineer reviews and approves the set, it produces the consolidated material take-off and bill-of-quantities workbooks, with revision tracking.

1 AI reads the drawings

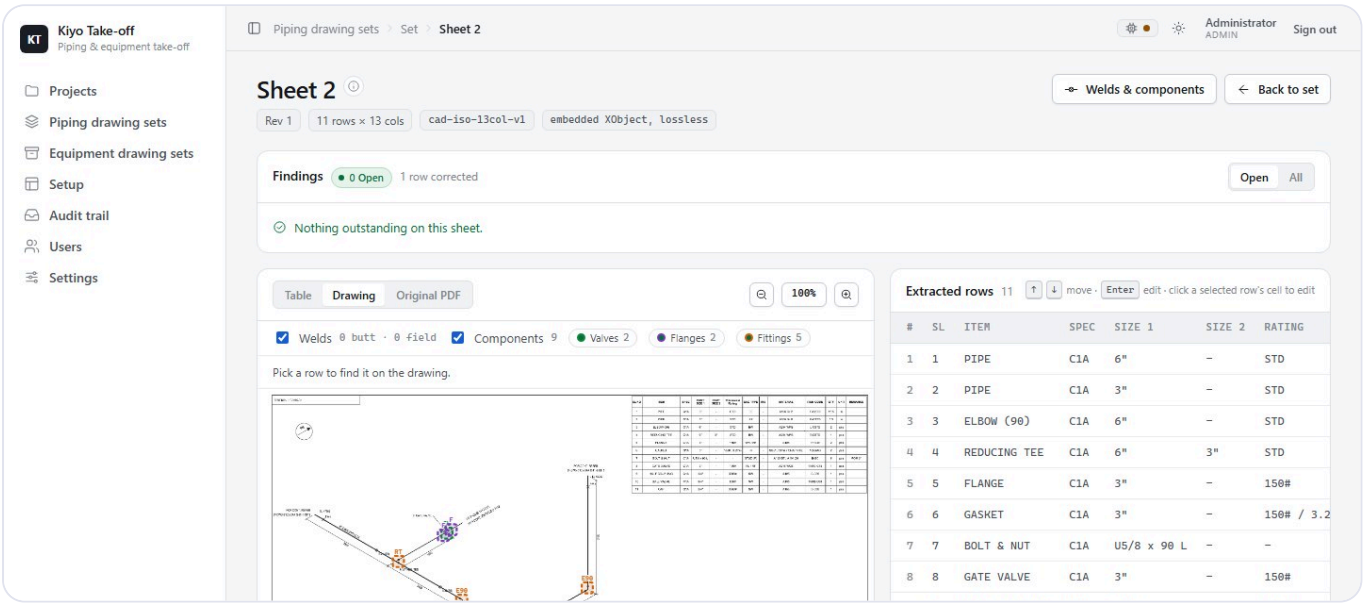

Each sheet's material table and title block is transcribed, and the drawing is read separately for pipe, fittings and valves.

2 Check and review

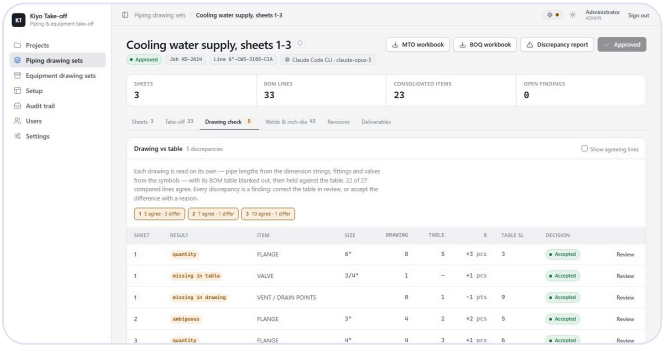

Drawing and table are compared line by line; every difference becomes a finding the engineer corrects or accepts with a reason.

3 Take-off and BOQ

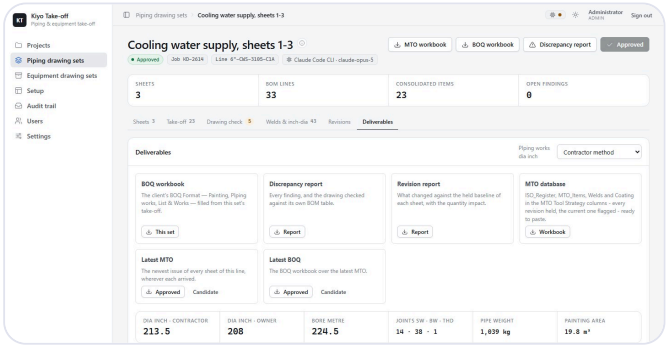

The approved set rolls up into a consolidated take-off, BOQ and MTO workbooks, with inch-dia, weights and painting area.

AI drawing read (sample data): valves, flanges and fittings found on an isometric, next to the rows extracted from its table.

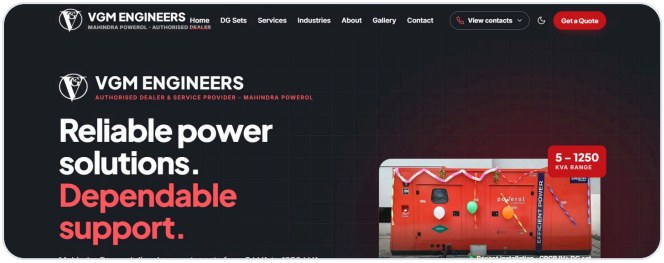

Drawing check (sample data): what the AI read on each drawing against its material table, with every difference and the engineer's decision.

Deliverables (sample data): BOQ and MTO workbooks, discrepancy and revision reports, inch-dia, weight and painting area.

A working demo with sample data, shown on a call. The drawings shown are fictional samples made for this demo. Talk to us about AI for your drawings and documents at info@kiyosoft.com.

03 Selected websites, platforms and in-house apps

VGM Engineers home page: generator sets from 5 to 1250 kVA, with quote and product range actions.

WEBSITE PROJECT · Preview available

VGM Engineers

A corporate website for a diesel generator dealer: the product range, service and maintenance contracts, the industries served and quote requests, with a 3D-led design.

vgm-3d.netlify.app

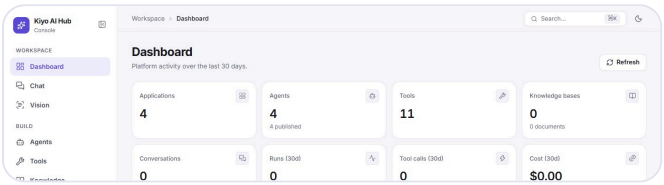

DD Creative home page: the interactive 3D wristband with colour choices, and quote and product actions.

WEBSITE PROJECT · Preview available

DD Creative

A website for a patient identification wristband manufacturer, with an interactive 3D wristband visitors can rotate and recolour, a product catalogue and bulk enquiries.

dd-creative.netlify.app

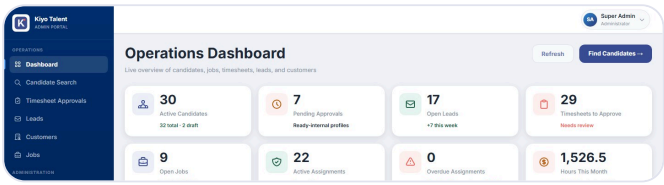

Kiyo AI Hub dashboard (demo data): applications, agents, conversations and runs over the last 30 days.
